

## HALO®

### Dining Room Table with an Integrated, Ambient Light Source

HALO is a dining room table with an integrated, ambient LED light source. The components are made of bamboo plywood, a rapidly renewable material and a contributing finish under the 6.0 Section of the U.S. Green Building Council's LEED Materials and Resource Point System. Halo is designed with the minimal number of connections, making it very easy to assemble, disassemble and ship flat.

#### Options and Features

HALO is designed for maximum material usage and minimal material waste. HALO is fabricated out of a single sheet of 3/4" plywood. Fabrication options: Amber or Natural, flat grain or edge grain, 3-Ply Bamboo Plywood.

#### Finishes

Bamboo plywood is finished with Danish oil to seal surfaces and bring out their natural sheen.

#### Dimensions

Diameter: 48in / 121.9cm  
Height: 29.5in / 74.9cm

Amber edge grain  
3-ply Bamboo

Natural edge grain
